2 - 6 24:43

The Seahorse

Did you know that a seahorse is a fish? It lives in the sea, but it doesn't look like other fish at all. It is called a seahorse because it has a long neck and a head that looks like a horse. However, the other end of its body is long like a snake. They can use their body to hold on to things because they can't swim very well. Seahorses are the slowest fish because they only have a little fin in the middle of their back.

Seahorses don't have teeth, so they can't eat food like other fish. They must eat their food in a different way. They pull food into their mouths through their long noses instead.

Read the text and answer the questions.

1 - 3 3.00 علامة

How is a seahorse very different to other fish?

a. They are not the same shape as most fish.

b. Their necks are like snakes.

c. They swim like horses, not fish.

d. (this is too difficult)

السؤال التالي

Cairo

There is so much to see and do in Cairo, from interesting museums to traditional markets. The traffic in the city is very busy, so the easiest way to travel around is by bus. It is a cheap and fun way to explore the city. Taxis can be expensive, though, as there are not enough of them for all of the people. Taxis that wait outside hotels will be more expensive than those you find in the streets. Walking around the old part of city is safe, but remember to keep your bags and camera out of sight.

A good place to visit is Cairo's spice market. It smells amazing, but it can be very crowded and the shop keepers will try to stop you as you walk. If you want to buy something from a shop, don't pay the first price that you see as it is usually too high. You should argue politely with the shop keeper for a better price. Don't worry - this is not rude and can actually be quite fun!

Cairo is famous for its Cairene houses. These are traditional Egyptian houses with an inside garden or courtyard. They range from small and basic, to large and expensive. There are many modern hotels in the new city, but for the most interesting experience, you should try staying in a traditional Cairene home in the old market area.

Read the text and answer the questions.

2 - 4 4.00 علامة

How can you save money when buying something in the spice market?

a. by asking the seller to lower the cost

b. by walking away from the shopkeeper

c. by being unfriendly to the shop owner

Hummingbirds

There are over 300 types of hummingbirds. These birds are different to others as they are the only birds that can fly backwards and upside down. Their wings move extremely fast; on average, they beat 70 times every second. This means that they can stay still while they are eating. They are called hummingbirds because of the sound made when they flap their wings. When they dive through the air, they can fly almost 100 kilometres per hour.

A hummingbird's diet is mainly made up of nectar. However, they also hunt for insects which provide them with the full range of foods that they need. Hummingbirds need to eat every 10 minutes because they use so much energy when they fly. When they are not eating, hummingbirds need to rest in trees.

Every year, hummingbirds fly somewhere warm to escape the cold weather. The Ruby-Throated Hummingbird is quite interesting. It regularly travels over 3000km to reach Central America, starting in the Eastern part of the USA, and flying over the Gulf of Mexico. Many large birds, such as owls, catch hummingbirds to eat. However, hummingbirds can fight off these attackers with their sharp beaks. Unfortunately, the main danger to hummingbirds is trees being cut down, which causes them to lose their environment.

Read the text and answer the questions.

1 - 3 3.00 علامة

Why do hummingbirds' wings move so quickly?

a. so that they can fly backwards

b. so that they can fly faster

Hummingbirds

There are over 300 types of hummingbirds. These birds are different to others as they are the only birds that can fly backwards and upside down. Their wings move extremely fast; on average, they beat 70 times every second. This means that they can stay still while they are eating. They are called hummingbirds because of the sound made when they flap their wings. When they dive through the air, they can fly almost 100 kilometres per hour.

A hummingbird's diet is mainly made up of nectar. However, they also hunt for insects which provide them with the full range of foods that they need. Hummingbirds need to eat every 10 minutes because they use so much energy when they fly. When they are not eating, hummingbirds need to rest in trees.

Every year, hummingbirds fly somewhere warm to escape the cold weather. The Ruby-Throated Hummingbird is quite interesting. It regularly travels over 3000km to reach Central America, starting in the Eastern part of the USA, and flying over the Gulf of Mexico. Many large birds, such as owls, catch hummingbirds to eat. However, hummingbirds can fight off these attackers with their sharp beaks. Unfortunately, the main danger to hummingbirds is trees being cut down, which causes them to lose their environment.
