An article

Of course everyone living in this century knows how much we are lucky to have all these inventions and discoveries which changed our life to the best. In the past, people were living a difficult life. For example, traveling from a place to another was very difficult and tiring and many people died before they reached their required destinations. All because of the simple means of transportation like donkeys and the old carriages. However, there was no electricity, so people in the past used to live in the darkness without lights which made people suffer from lots of diseases.

Now, the world became a small village. People live in a comfortable life and everything is easy to get. On TV we can watch all what is happening around the world at the same time and by a simple click on the computer mouse we can get all the information we need. As well as that, computers make work easier and faster, so it saves time and effort. Also, in the present time, communication isn't a hard thing because we can talk with anyone we want in anywhere by the net or using the mobiles.

I think there will be even more changes in the future. Robots will be working in factories and companies instead of people. Also, cars will work by solar energy, especially in Bahrain because it's always hot and sunny. So, everything will be available because of technology.
