Subject : pollution around the world

Date: 21<sup>st</sup> Dec 2009

The aim of this report is to explain the problem of pollution which is making people suffers. And in this report I will be discussing the negative and positive things, so we may solve the problem.

On the one hand, there are too many negative things that we should look at and try to fix such us:

- 1- Pollution damages people's health, so they have many diseases like cancer, coughing,...etc. and this is very danger so we have to take it series and try to have for it a solution.
- 2- As well as damaging people's health it also destroys nature and environment. And animals start dying out, so it leads to hunger for humans.

On the other hand, because of development and the new inventions and machines pollution problem is growing and these are the positive things:

- 1- Using the new machines is on cause for pollution but it's very useful for us because it saves the human effort and time.
- 2- Some of other pollution causes became very important in the life like using cars and if we stopped using it we will forget the meaning of development.

At the end, I know it's hard to solve the problem but it's easy to control it with a help from the governments to aware people and make them feel more responsible and care more about keeping the environment safe for all the creatures.
