Writing models

Third intermediate – first semester

Unit 1

My family, who loves each other dearly, has 5 members including me. My mom, my dad, me, one sister and one brother. We have a strong unbreakable connection between us.

I am very close to my sister since we both share a room. We are the same in many ways. We both are very organized, we like to keep our room clean and tidy. Moreover, we share similar interests. For example, I like reading comics and watching anime. She does, too.

However, we do have some dissimilarities. When it comes to socializing, I tend to be outgoing to talkative with people while my sister tends to be introvert and shy. In addition, I like to revise my lessons everyday after school. On the other hand, my sister studies a night before the exam! I can never do that!

Despite our differences, we love each other and will do anything to one another.

Unit 1

Families are always alike. Everybody knows that me and my cousin are family from the way we look and type of personality we have. However, we still have many differences.

The first thing we share is the face! We look almost the same! We also like drawing together. We are both very talented! I really like spending time with her. We share a lot of activities together. We are both active and energetic.

Yet, we are not that alike in every way. My cousin is outgoing. She can easily make friends. Unlike me, I am shy and don't like talking to a lot of people. Also, I think positively, so I am an optimistic person. She, on the other hand, is a pessimistic person. And we don't have the similar taste in movies or food.

Despite all the differences we have in our personalities. We are each other's favorite person and we enjoy our time together the most.

Unit 2

Everyone fears something and I fear bees. Ever since I saw my cousin's face after she got stung by bees and I felt scared of them. But I hated feeling scared, so I decided to change.

First, I read about bees. I read about how beneficial they are to the planet. They're hardworking, social and organized. **For example**, they help pollinate plants and flowers and they produce honey.

Next, I visited a bee farm where they raise bees and produce different types of honey. I was wearing a protective suit. **Then**, I watched the beehives closely.

Finally, I felt confident enough to remove the protective suit and let bees fly around me. Now, whenever I see a bee I don't feel scared like I used to.

In my opinion, you should try to get over your fear. It might not be easy but the result at the end is worth it.

Unit 2

Lizards are hated by many people and many feel scared when they see one. I felt that way too but I decided to change that.

First, I talked with my grandmother about my fear and she told me that lizards are beneficial around the house because they eat bugs and spiders.

Next, I watched some educational videos about them and I learned that they don't attack or bite humans.

Finally, every time I saw a lizard, I tried to calm down and remember what I have learned, little by little the fear reduced until it vanished.

In my opinion, you should try to get over your fear. It might not be easy but the result at the end is worth it.

Unit 2

All people are afraid of some animals. I'm scared of cats because when I was young a cat jumped on my face and scratched it. I hated living in fear for years, so I decided to change that.

First, I read about cats. I found out that they are beneficial for humans. **For example**, they kill mice and harmful pests. **In addition**, they make people happy when they play with them and reduce feeling of loneliness.

Next, I watched funny videos of cute cats. **Then**, I visited my friend who owns a cat. She let me see her cat and play with it from a safe distance with a laser light.

Finally, I felt confident enough to pat the cat which made me love cats and encouraged me to adopt one at the end.

In my opinion, you should try to get over your fear. It might not be easy but the result at the end is worth it.

Unit 2

Many people love horse but I fear them dearly because I fell off a horse when I was younger and hurt my back. But I hated feeling scared, so I decided to change.

First, I read about horses and I learned that they are beneficial for humans. **For example**, they make you more social because you will spend a lot of time outdoor and you will meet new people. mice and harmful pests. **Moreover**, riding a horse benefits our health and fitness.

Next, I went to a horse stable with my uncle, because he loves horses. He helped watch them from a safe distance and feed them. **Then**, I got encouraged to pat it and brush its hair.

Finally, after few visits to the stable, I felt confident enough to ride one.

In my opinion, you should try to get over your fear. It might not be easy but the result at the end is worth it.

Unit 3

Hi Tamara,

Thanks for your email. It's been a long time since we last met. Your project about group behavior sounds interesting! I think my behavior changes when I'm with my family too.

Sometimes I like being alone, but I usually prefer being with my family. My sisters and I enjoy being together because we're interested in a lot of the same things. For instance, we all like shopping, and most of us play in the school band. We also like to have outdoor picnics such as picnicking at the park. At other times, we love visiting or participating in sport events. We don't usually take part in matches, but we enjoy watching the matches and spending time together, talking and laughing. We all share the same sense of humor. In other words, we find the same things funny, but sometimes we don't even know why we're laughing. For example, if one of us starts laughing about something, the rest of us will join in, even if we don't know what we're laughing about. We can't help it!

What about you? What do you enjoy doing with your family? I'd love to know if your behaviour changes when you're with them.

Write soon!
Amy

Unit 3

Hi Amal,

Thank you for your email. It's been a long time since we last met. Your project about group behavior sounds interesting! Most of us change behavior around family too.

Winter has come, usually we go camping with our family, in Sakhair, and we spend the whole day together, doing fun activities. There are a lot of activities to do there such as buggy riding, which I love doing with my older brother because he's so competitive. Also, barbeque time is always fun because dad usually burns the first burger. At night, we love gathering around the fire and telling scary stories to scare the young cousins or playing charades which always makes us laugh and scream our lungs out. In other words, time passes by having fun doing these activities, especially with family members of your age. For example, if one of us starts telling a scary story another one tells a scarier one, and the rest of us will join in, we can't help it!

What about you? What do you enjoy doing with your family? I'd love to know if your behavior changes when you're with them.

Write soon!
Maria

Unit 5

When we think of flying animals, the first thing that comes to our mind is birds. However, there are other animals that fly, too. Bats and insects like butterflies are two of them.

Bats are the only mammals that can truly fly. Their wings are actually hands that have adapted for flight. They have five fingers like us. Bats can move their wings like we use hands in swimming. They can fold their wings into different shapes and change directions very quickly.

Butterflies look different from many other flying animals, compared to birds and bats, butterflies have really big wings for the size of their bodies. Because the wings are so big, they make it easier for the insect to move. They have strong muscles in their chest which force their wings to go up and down.

In conclusion it is amazing how both bats and butterflies fly, yet it is in a different way with different wings. Which are the other flying animals would you like to learn how they fly?

Unit 5

The animal kingdom is full of animals that can fly, such as mammals, insects and birds. Bats and pigeons both have wings, but they fly differently.

Bats are the only flying mammals. Their wings are totally different from birds as they consist of flaps of skin stretched between the bones of the fingers and the arms. This helps bats fly and ascend quickly and smoothly.

As for pigeons, their wings are very different from bats. They consist of hollow but hard bones which are covered with feathers all along the arms to help them control their flight. Pigeons' wings are very light and flexible, making their flying easier.

To sum up, even though bats and pigeons both have wings, the two fly differently because of the different features they have.
