# Grade 8 1<sup>st</sup> Live Session

**Mid of 1<sup>st</sup> semester  
Consolidation material**

# Learning Objective

- ♦ By the end of this session, students will be able to:
  1. Locate specific information after reading the text.
  2. Identify some grammar rules by answering the given sentences.
  3. Recognise the meaning of some vocabulary through the context.

A pair of black-rimmed glasses with clear lenses is resting on an open book. The book has a red bookmark visible on the left side. The background is softly blurred, showing more books and a wooden surface. In the foreground, a white banner with red text is overlaid on the image.

**Reading Section**

**(1)** Computers are machines that can help us in many ways. But they cannot think nor do things on their own because humans have to feed them with information and tell them what to do with it. They cannot come up with any new information. But they can save much time and work. For example, all the information and the office files can be stored in a computer's "memory". If you need any information from a particular file, the computer would only take seconds to find it. It would take you days or even weeks to go through every file if no computers were used.

**(2)** The first computers were huge and costly. They filled up almost the whole floor of large offices. Later, because of the usefulness and demand for computers in business, scientists soon found ways to produce cheaper and smaller computers. They invented chips which made it possible to store more information in less space.

**(3)** Today, computers are cheaper; \_\_\_\_\_, they are more powerful. They can just be placed on top of an ordinary writing table. They can even be carried from place to place easily. Computers are not only used in offices by companies, but they are also used at home, by families who can afford them.

**(4)** Robots, on the other hand, are not mechanical people. They are computers which perform heavy tasks; for instance, a robot can do the same work for twenty four hours, and yet, it does not complain or get tired. In the United States robots are computers that tell them where to guard and what to do. These robots are programmed to listen for certain noises and signals for help in case of trouble or danger.

## 1. Why can't computers think or do things on their own?

- A. because they have a large memory.
  - B. because they need a long time to process information.
  - C. Because the information they give is not always accurate.
  - D. Because they receive information and instruction from people.
- 

## 2. Choose the best word to complete the sentence.

"Today, computers are cheaper; \_\_\_\_\_, they are more powerful."

- A. as a result
- B. because
- C. however
- D. since

### 3. What is true about computers in the past?

- A. They were huge and cheap.
- B. They were used only at homes.
- C. They were expensive and very large.
- D. They could be carried from place to place easily.

**(1)** Computers are machines that can help us in many ways. But they cannot think nor do things on their own because humans have to feed them with information and tell them what to do with it. They cannot come up with any new information. But they can save much time and work. For example, all the information and the office files can be stored in a computer's "memory". If you need any information from a particular file, the computer would only take seconds to find it. It would take you days or even weeks to go through every file if no computers were used.

**4. With reference to the first paragraph, why are computers useful when searching for information?**

**It could get information in seconds.**

---

---

## 5. Why did scientists invent chips?

to store more information in less space

---

---

## 6. Complete the following with reference to the last paragraph.

Robots can perform heavy tasks for long hours without complaining or getting tired.

---

---

(4) Robots, on the other hand, are not mechanical people. They are computers which perform heavy tasks; for instance, a robot can do the same work for twenty four hours, and yet, it does not complain or get tired. In the United States robots are computers that tell them where to guard and what to do. These robots are programmed to listen for certain noises and signals for help in case of trouble or danger.

---

**6. Complete the following with reference to the last paragraph.**

Robots can perform heavy tasks for long hours without **complaining or getting tired.**
